Zionism and Technocracy - Derek Jonathan Penslar 1991

"Zionism and Technocracy is important reading for anyone seriously interested in the development of the Yishuv during the last decades of Ottoman rule." —Choice "... stimulating and well written..." —Shofar "A pioneering work on the most important aspect of early Zionist history, well researched, well written, highly to be recommended." —Walter Laqueur "Taut and well-written with a fresh approach, Penslar's painstakingly researched study fills an important gap in the literature on the early Yishuv." —The Jerusalem Post Magazine "Penslar has written one of the first 'social histories' of an important aspect of Zionism." —David Sorkin "... Penslar presents an alternative perspective of those early days of Jewish settlement. Instead of a tale of individuals and their efforts, it is history of the organizational efforts to develop the institutions needed to reestablish the Jewish presence on the land." —Midstream The creation of a Jewish homeland in modern Palestine represented a monumental technical achievement. This achievement, and the story of the Jewish technocrats from Central Europe who engineered it, is documented here for the first

time—bringing together social, intellectual, and institutional history in a pathbreaking study.

Democratization of Expertise - Ron Fulbright 2020-10-27

We create technology enabling us to do things never before possible and it ultimately changes the way we live, work, play, and interact with

each other. Throughout human history, the democratization of technology making a technology available to the masses, has brought about sweeping cultural, social, political, and societal changes. In the last half-century, the democratization of computers, information, the Internet, and social media have revolutionized and transformed our lives. We now stand at the beginning of a new era sure to bring about waves of new revolutions, the cognitive systems era. Until now, humans have done all of the thinking. However, our lives are about to be infused with artificial entities capable of performing high-level cognitive processing previously possible only in the human mind. Systems capable of this kind of "synthetic cognition" will achieve and surpass the level of human experts in almost every field of endeavor. Far from replacing humans, these cognitive systems will be our collaborators, teachers, confidants, colleagues, and companions. The future will belong to those who can better partner with these cognitive systems. Made available to the average person via the Internet, handheld devices, and through ordinary objects all around us, expertise will become democratized. Everything will change when anyone has access to expertise in any field and new things will be possible. The democratization of expertise is the foundation on which our society's revolutions will be built over the next half-century. This book discusses societal and cultural revolutions throughout history brought about by the adoption of new technology and gives brief histories of human cognitive augmentation and artificial intelligence. In the coming cognitive systems era, humans, by collaboratively partnering with cognitive systems, will together achieve expert-level performance—synthetic expertise—with humans performing some of the cognitive processing and cognitive systems performing some. As the capabilities of cognitive systems improve over time, the balance of thinking will shift from being mostly human to mostly artificial. This book introduces the Levels of Cognitive Augmentation to describe this shift. Drawing from previous research in cognitive systems and intelligent agent theory, the knowledge stores required for expertise are identified in a Knowledge Level description of expertise. This

book introduces a new abstract level, called the Expertise Level to describe the skills needed for expertise. Combining the knowledge-level and expertise-level descriptions, this book introduces the Model of Expertise. This book demonstrates use of the Model of Expertise by presenting several synthetic expert architectures: a synthetic teacher (Synthia), a synthetic friend/therapist (Sy), a synthetic elderly companion (Lois), a synthetic research companion (Synclair), and an automated scientific hypothesis explorer (Ashe). This book is intended for anyone interested in the fields of cognitive systems, cognitive computing, cognitive augmentation, or artificial intelligence or the impact of technologies from these fields on society. Anyone doing research and development in the area of cognitive systems or artificial intelligence will find this book particularly useful.

*Distorting the Law* - William Haltom 2009-11-15  
In recent years, stories of reckless lawyers and greedy citizens have given the legal system, and victims in general, a bad name. Many Americans have come to believe that we live in the land of

the litigious, where frivolous lawsuits and absurdly high settlements reign. Scholars have argued for years that this common view of the depraved ruin of our civil legal system is a myth, but their research and statistics rarely make the news. William Haltom and Michael McCann here persuasively show how popularized distorted understandings of tort litigation (or tort tales) have been perpetuated by the mass media and reform proponents. Distorting the Law lays bare how media coverage has sensationalized lawsuits and sympathetically portrayed corporate interests, supporting big business and reinforcing negative stereotypes of law practices. Based on extensive interviews, nearly two decades of newspaper coverage, and in-depth studies of the McDonald's coffee case and tobacco litigation, *Distorting the Law* offers a compelling analysis of the presumed litigation crisis, the campaign for tort law reform, and the crucial role the media play in this process.
