

# Electroweak Symmetry Breaking By Dynamically Generated Masses Of Quarks And Leptons Springer Theses

When somebody should go to the ebook stores, search creation by shop, shelf by shelf, it is truly problematic. This is why we present the books compilations in this website. It will totally ease you to look guide **Electroweak Symmetry Breaking By Dynamically Generated Masses Of Quarks And Leptons Springer Theses** as you such as.

By searching the title, publisher, or authors of guide you truly want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best place within net connections. If you set sights on to download and install the Electroweak Symmetry Breaking By Dynamically Generated Masses Of Quarks And Leptons Springer Theses, it is enormously easy then, back currently we extend the associate to purchase and create bargains to download and install Electroweak Symmetry Breaking By Dynamically Generated Masses Of Quarks And Leptons Springer Theses in view of that simple!

**MRST '96** - Patrick J O'Donnell 1996-11-22

Contents: The Infamous Coulomb Gauge (G Leibbrandt)Renormalized Path Integral in Quantum Mechanics (R J Henderson & S G Rajeev)New Analysis of the Divergence of Perturbation Theory (S A Pernice)The Last of the Soluble Two Dimensional Field Theories? (C R Hagen)Rb and Heavy Quark Mixing (P Bamert)Rb Problem: Loop Contributions and Supersymmetry (J M Cline)QCD Radiative Effects in Inclusive Hadronic B Decays (B H Smith)CP-Violating Dipole Moments of Quarks in the Kobayashi-Maskawa Model (M Boridy et al.)Hints of Dynamical Symmetry Breaking? (B Holdom)Pi Pi Scattering in an Effective Chiral Lagrangian (M Harada)Pion-Resonance Parameters from QCD Sum Rules (T G Steele et al.)Higgs Theorem, Effective Action, and Its Gauge Invariance (Y Vtorov-Karevsky)SUSY and the Decay  $H^0 \rightarrow gg$  (H König)Effective Higgs-to-Light Quark Coupling Induced by Heavy Quark Loops (M R Ahmady et al.)Heavy Charged Lepton Production in Superstring Inspired E6 Models (M M Boyce et al.)The Elastic Properties of a Flat Crystalline Membrane (M Bowick et al.)Gauge Dependence of Topological Observables in Chern-Simons Theory (F A Dilkes et al.)Entanglement Entropy from Edge States (A Momen)A Simple General Treatment of Flavor Oscillations (Y Grossman & H J Lipkin)From Schrödinger to Maupertuis: Least Action Principles from Quantum Mechanics (C G Gray et al.)The Matrix Method for Multi-Loop Feynman Integrals (J D Williams)Simplification in QCD and Electroweak Calculations (Y J Feng & C S Lam) Readership: Graduate and postgraduate students in high energy physics. keywords:

**String Phenomenology 2003** - Veronica Sanz 2004

This book contains a remarkable overview of the current trends in string phenomenology, through the contributions of an international team of researchers who present their latest results. Dedicated to the memory of the late Professor Ian Kogan, this volume will fill a gap in the literature on a comprehensive overview of the subject. The proceedings have been selected for coverage in: . OCo Index to Scientific & Technical Proceedings- (ISTP- / ISI Proceedings). OCo Index to Scientific & Technical Proceedings (ISTP CDROM version / ISI Proceedings). OCo CC Proceedings OCo Engineering & Physical Sciences."

**Issues in Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics: 2011 Edition** - 2012-01-09

Issues in Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics. The editors have built Issues in Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Nuclear, High Energy, Plasma, Particle, and Condensed Matter Physics: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority,

confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

**Strong Coupling Gauge Theories and Effective Field Theories** - K?ichi Yamawaki 2003

Readership: Graduate students and researchers in high energy physics, particularly those interested in dynamical symmetry breaking and effective field theories.

**XXI DAE-BRNS High Energy Physics Symposium** - Bipul Bhuyan 2015-12-30

These proceedings gather invited and contributed talks presented at the XXI DAE-BRNS High Energy Physics Symposium, which was held at the Indian Institute of Technology Guwahati in December 2014. The contributions cover many of the most active research areas in particle physics, namely (i) Electroweak Physics; (ii) QCD and Heavy Ion Physics; (iii) Heavy Flavour Physics and CP Violation; (iv) Neutrino Physics; (v) Astro-particle Physics and Cosmology; (vi) Formal Theory; (vii) Future Colliders and New Machines; and (viii) BSM Physics: SUSY, Extra Dimensions, Composites etc. The DAE-BRNS High Energy Physics Symposium, widely considered to be one of the premiere symposiums organised in India in the field of elementary particle physics, is held every other year and supported by the Board of Research in Nuclear Sciences, Department of Atomic Energy, India. Roughly 250 physicists and researchers participated in the 21st Symposium, discussing the latest advancements in the field in 18 plenary review talks, 15 invited mini-review talks and approximately 130 contributed presentations. Bringing together the essential content, the book offers a valuable resource for both beginning and advanced researchers in the field.

**Lepton-photon Interactions - Proceedings Of The Xvii International Symposium** - Zhi Peng Zheng 1996-07-26

The is the most important conference on high energy physics in 1995. The speakers and the list of topics discussed are as follows:

**Supersymmetry And Unification Of Fundamental Interactions (Susy 93) - Proceedings Of The International Workshop** - Nath Pran 1993-11-22

The recent high precision results from the LEP supercollider at CERN appear favorable for supergravity unification of the electroweak and the strong forces. The proceedings of the SUSY 93 Workshop focus on further precise predictions of unification which may be observed in the laboratory. In addition, the proceedings cover a wide range of other topics in supersymmetry, supergravity, particle physics, string theory and cosmology and their interconnections. They include both theoretical and experimental papers, hence presenting a complete and comprehensive picture of this important subject.

**High Energy Physics Index** - 1993

**Fluctuating Paths and Fields** - Wolfhard Janke 2001-06-04

This volume covers the following fields: path integrals, quantum field theory, variational perturbation theory, phase transitions and critical phenomena, topological defects, strings and membranes, gravitation and cosmology. Contents:Path Integrals and Quantum Mechanics:Semiclassical Quantum Mechanics: A Path-Integral Approach (B R Holstein)Conjecture on the Reality of Spectra of Non-Hermitian Hamiltonians (C M Bender et al.)Time-Transformation Approach to q-Deformed Objects (A Inomata)Characterizing

Volume Forms (P Cartier et al.) Vassiliev Invariants and Functional Integration (L H Kauffman) Quantum Field Theory: Dynamical Fermion Masses Under the Influence of Kaluza-Klein Fermions in Randall-Sundrum Background (H Abe et al.) From Z Operator to SO(10), Neutrino Oscillations, and Fermi-Dirac Functions for Quark Parton Distributions (F Buccella) Variational Perturbation Theory: Note on the Path-Integral Variational Approach in Many-Body Theory (J T Devreese) Phase Transitions and Critical Phenomena: Nanosymptotic Critical Behavior from Field Theory (C Bagnuls & C Bervillier) From Superfluid  $^3\text{He}$  to Triplet Superconductor  $\text{Sr}_2\text{RuO}_4$  (K Maki & H Won) Topological Defects, Strings, and Membranes: Description of Vorticity by Grassmann Variables and an Extension to Supersymmetry (R Jackiw) Non-Equilibrium Worldline Duality in Condensed Matter (R J Rivers) Random Paths and Surfaces with Rigidity (B Durhuus) Path Integrals in Quantum Cosmology (C Kiefer) and other papers Readership: Condensed matter, high energy, quantum, statistical and mathematical physicists. Keywords: Path Integrals; Quantum Field Theory; Variational Perturbation Theory; Phase Transitions; Critical Phenomena; Topological Defects; Strings; Membranes; Gravitation; Feynman Propagator; Kaluza-Klein Theory; Critical Exponent; Torsion; Quantum Cosmology; Inflationary Cosmology; Asymptotic Freedom Reviews: "This collection of articles represents an exciting tour through modern theoretical physics; therefore the volume is recommended to a broad readership." **General Relativity and Gravitation Electroweak Symmetry Breaking - Proceedings Of The Budapest Workshop** - Ferenc Csikor 1995-04-26

This volume contains the talks given at the above workshop which was devoted to discussing the newest developments in various models of electroweak symmetry breaking forming the basis of modern particle physics. It includes various aspects of Higgs physics and condensate models embodying dynamical symmetry breaking.

**Physics of the Large and the Small** - Csaba Csiki 2011

This volume presents a set of pedagogical lectures that introduce particle physics beyond the standard model and particle cosmology to advanced graduate students.

**Frontier 96: Nuclear Physics Frontiers With Electroweak Probes - Proceedings Of Xv Rcnp Osaka International Symposium** - Hiroshi Toki 1996-10-25

**Gauge Theories — Past and Future** - R Akhoury 1992-10-28

This is a commemoration volume to honor Professor M Veltman on the occasion of his 60th birthday. It contains articles on Gauge field theories, a subject to which Prof. Veltman has made many important and seminal contributions. Some of the contributions are based on invited talks given at the Conference held in Ann Arbor, Michigan, May 16 - 18 1991. The articles in the book cover a wide range of topics from formal and phenomenological to the experimental aspects of Gauge theories. Contents: Comments on the Occasion of the Symposium Celebrating the Sixtieth Birthday of Martinus Veltman (H Neal) The Largest Time Equation and Long Distance Behavior in Gauge Field Theories (R Akhoury) Top Quark Condensate Models (W A Bardeen) Fast and Reliable Random Numbers for Extensive Monte Carlo Calculations (A Compagner) Large Higgs Mass, Triviality and Asymptotic Freedom (M Consoli) Strong CP Violation and Effective Chiral Lagrangians (E de Rafael) Is Your Weight Gauge Dependent? (B de Wit) Effective Theories and Thresholds in Particle Physics (M K Gaillard) Neutrino Mass Matrices with Minimal Polynomials of Second or Third Degree in the Three Family Model (C Jarlskog) QCD: Some Like It Hot or Why There Have Been Small Bangs (C Korthal-Altes) The Last Ten Years of Radiative Corrections (G Passarino) The Analytic Value of the Atomic Three Electron Correlation Integral with Slater Wave Functions (E Remiddi) Example of Quantum Field Theory Based on Nonlinear Lie Algebra (P van Nieuwenhuizen, K Schoutens & A Sevrin) Tini and the Cosmological Constant (L Susskind) The Veltman Vertex (R Thun) Third Threshold in Weak Interactions? (H Veltman & J J van der Bij) Relation Between the Practical Results of Current Algebra Techniques and the Originating Quark Model (M Veltman) Landau Poles, Violations of Unitarity and a Bound on the Top Quark Mass (F J Yndurain) and other papers Readership: High energy physicists. keywords: **Electroweak Physics at LEP and LHC** - Arno Straessner 2010-03-14

During more than 10 years, from 1989 until 2000, the LEP accelerator and the four LEP experiments, ALEPH, DELPHI, L3 and OPAL, have taken data for a large amount of measurements at the frontier of

particle physics. The main outcome is a thorough and successful test of the Standard Model of electroweak interactions. Mass and width of the Z and W bosons were measured precisely, as well as the Z and photon couplings to fermions and the couplings among gauge bosons. The rest part of this work will describe the most important physics results of the LEP experiments. Emphasis is put on the properties of the W boson, which was my main research field at LEP. Especially the precise determination of its mass and its couplings to the other gauge bosons will be described. Details on physics effects like Colour Reconnection and Bose-Einstein Correlations in W-pair events shall be discussed as well. A conclusive summary of the current electroweak measurements, including low-energy results, as the pillars of possible future findings will be given. The important contributions from Tevatron, like the measurement of the top quark and W mass, will round up the present day picture of electroweak particle physics. This is an open access book.

**Current Topics In Physics - Proceedings Of The Inauguration Conference Of The Asia-pacific Center For Theoretical Physics (In 2 Volumes)** - Cho Yongmin 1998-04-04

**Dynamical Gauge Symmetry Breaking** - Edward Farhi 1982

This book is a collection of original papers on dynamical gauge symmetry breaking, and is intended for graduate students and researchers in theoretical physics (elementary particle physics and others) who have an understanding of basic quantum field theory. The book can serve as a research text for those requiring an introduction to dynamical gauge symmetry breaking and as a reference text for active researchers. The important papers in the field that are included deal with attempts to apply the ideas to realistic models of elementary particle interactions. A historical critique by the editors provides an introductory review.

*New physics frontiers in the LHC-2 era, the*

*proceedings of the 54th course of the international school of subnuclear physics* - Zichichi Antonino 2019-06-24

In June 2016, a group of 167 physicists from 31 countries have met in Erice to participate in the 54th Course of the International School of Subnuclear Physics. The main focus of this year's course has been the new frontiers of Physics in the LHC-2 Era and in all labs the world over, as well as the new frontiers in related fields.

**New Physics With New Experiments - Proceedings Of Xvi Kazimierz Meeting On Elementary Particle Physics** - Ajduk Zygmunt 1994-06-21

This book provides a new original perspective on one of the most fascinating and important open questions in science: What is quantum mechanics talking about? Quantum theory is perhaps our best confirmed physical theory. However, in spite of its great empirical effectiveness and the subsequent technological developments that it gave rise to in the 20th century, from the interpretation of the periodic table of elements to CD players, holograms and quantum state teleportation, it stands even today without a universally accepted interpretation. The novelty of the book comes from the multiple viewpoints and the original angles taken by a group of young researchers from Europe and South America who gathered for several years under the auspices of the Center Leo Apostel. Each member of the group presented ideas concerning the interpretation of quantum mechanics. We had discussions ranging from the philosophical underpinnings of local realism and holism, information and decision theoretic approaches to quantum theory all the way to the many worlds interpretation. Strikingly, in much the same way as different — and indeed incompatible observations are needed to fully describe the physical state of affairs in quantum mechanics — the various interpretations of the theory also seem to shed viable, but not necessarily compatible, perspectives on different aspects of the same grand framework. The discussions that followed were both technical and lively, but perhaps their most remarkable quality was the absence of rigid points of view that unfortunately seems to paralyze so much of the discussion in this area. This book is an expression which can be interesting not only to the specialists but also for the general public attempting to get a grasp on one of the still most fundamental questions of present physics.

*Perspectives On Supersymmetry* - Gordon Kane 1998-07-03

Supersymmetry is at an exciting stage of development. It extends the Standard Model of particle physics into a more powerful theory that both explains more and allows more questions to be addressed. Most important, it opens a window for studying and testing fundamental theories at the Planck scale. Experimentally we are finally entering the intensity and energy regions where superpartners are likely to

be detected, and then studied. There has been progress in understanding the remarkable physics implications of supersymmetry, including the derivation of the Higgs mechanism, the unification of the Standard Model forces, cosmological connections such as a candidate for the cold dark matter of the universe and the scalar fields that drive inflation and their potential, the relationship to Planck scale theories, and more. While there are a number of reviews and books where the mathematical structure and uses of supersymmetry can be learned, there are few where the particle physics is the main focus. This book fills that gap. It begins with an excellent pedagogical introduction to the physics and methods and formalism of supersymmetry, by S Martin, which is accessible to anyone with a basic knowledge of the Standard Model of particle physics. Next is an overview of open questions by K Dienes and C Kolda, followed by chapters on topics ranging from how to detect superpartners to connections with Planck scale theories, by leading experts. This invaluable book will allow any interested physicist to understand the coming experimental and theoretical progress in supersymmetry, and will also help students and workers to quickly learn new aspects of supersymmetry they want to pursue.

**CP Violation and the Limits of the Standard Model** - John F Donoghue 1995-06-09

TASI is the premier U.S. summer school in theoretical elementary particle physics. This volume is a collection of lectures given at TASI 1994. These lectures provide an overview of many basic topics in the field, as well as specific discussions of the theme of this year's course, which involved the frontiers of the present Standard Model. The volume should be extremely useful to students and young researchers as it provides pedagogical presentations of important topics. Contents: CP/CPT Experiments with Neutral Kaons or Experimental Study of Two Complex Numbers  $\eta_{+-}$  and  $\eta_{00}$  (S V Somalwar) Chiral Lagrangians and Kaon CP Violation (E de Rafael) The Strong CP Problem (S M Barr) QCD at TASI '94 (R K Ellis) Constructing CP-odd Observables (G Valencia) Fundamental Constants from b and c Decay (S Stone) An Introduction to the Theory of Heavy Mesons and Baryons (B Grinstein) Phenomenology from the Lattice (S R Sharpe) Introduction to the Physics of Higgs Bosons (S Dawson) Baryogenesis: Electroweak and Otherwise (M Dine) Modern Cosmology and Structure Formation (R H Brandenberger) Introductory Lectures on Low Energy Supersymmetry (P Ramond) The Low Energy World from Strings (Unification Predictions for the Parameters of the Supersymmetric Standard Model) (G G Ross) Readership: Researchers in high energy physics. keywords:

*The Origin of Mass and Strong Coupling Gauge Theories* -

**Understanding Gravity: The Generation Model Approach** - Brian A Robson 2021-06-22

Currently, the General Theory of Relativity (GTR) describes the physics of the very large in terms of classical physics, while quantum theory describes the physics of the very small in terms of the Standard Model of particle physics. Unfortunately, the two theories are incompatible and do not describe satisfactorily all the forces between the various particles comprising ordinary matter. At present, one of the deepest problems in theoretical physics is harmonizing the GTR, which describes gravitation, with quantum mechanics, which describes the other three fundamental forces acting on the atomic scale. The main aim of the book is to provide an understanding of gravity in terms of a quantum theory given by the Generation Model of particle physics. The book presents a fully quantum theory of gravity, which describes both the large cosmological scale and the small atomic scale interactions between all particles.

*Gauge Theories of the Strong, Weak, and Electromagnetic Interactions* - Chris Quigg 2013-09-23

A thoroughly revised edition of a landmark textbook on gauge theories and their applications to particle physics This completely revised and updated graduate-level textbook is an ideal introduction to gauge theories and their applications to high-energy particle physics, and takes an in-depth look at two new laws of nature—quantum chromodynamics and the electroweak theory. From quantum electrodynamics through unified theories of the interactions among leptons and quarks, Chris Quigg examines the logic and structure behind gauge theories and the experimental underpinnings of today's theories. Quigg emphasizes how we know what we know, and in the era of the Large Hadron Collider, his insightful survey of the standard model and the next great questions for particle physics makes for compelling reading. The brand-new edition shows how the electroweak theory developed in conversation with experiment. Featuring a wide-ranging treatment of electroweak symmetry breaking, the physics of the Higgs boson, and the

importance of the 1-TeV scale, the book moves beyond established knowledge and investigates the path toward unified theories of strong, weak, and electromagnetic interactions. Explicit calculations and diverse exercises allow readers to derive the consequences of these theories. Extensive annotated bibliographies accompany each chapter, amplify points of conceptual or technical interest, introduce further applications, and lead readers to the research literature. Students and seasoned practitioners will profit from the text's current insights, and specialists wishing to understand gauge theories will find the book an ideal reference for self-study. Brand-new edition of a landmark text introducing gauge theories Consistent attention to how we know what we know Explicit calculations develop concepts and engage with experiment Interesting and diverse problems sharpen skills and ideas Extensive annotated bibliographies

**An Introduction to Quantum Field Theory** - George Sterman 1993-08-26

This is a systematic presentation of quantum field theory from first principles, emphasizing both theoretical concepts and experimental applications. Starting from introductory quantum and classical mechanics, this book develops the quantum field theories that make up the 'Standard Model' of elementary processes. It derives the basic techniques and theorems that underly theory and experiment, including those that are the subject of theoretical development. Special attention is also given to the derivations of cross sections relevant to current high-energy experiments and to perturbative quantum chromodynamics, with examples drawn from electron-positron annihilation, deeply inelastic scattering and hadron-hadron scattering. The first half of the book introduces the basic ideas of field theory. The discussion of mathematical issues is everywhere pedagogical and self contained. Topics include the role of internal symmetry and relativistic invariance, the path integral, gauge theories and spontaneous symmetry breaking, and cross sections in the Standard Model and in the parton model. The material of this half is sufficient for an understanding of the Standard Model and its basic experimental consequences. The second half of the book deals with perturbative field theory beyond the lowest-order approximation. Exercises are included for each chapter, and several appendices complement the text.

**Physics Up to 200 TeV** - Antonino Zichichi 2013-03-07

During July 1990. a group of 83 physicists from 43 laboratories in 21 countries met in Erice for the 28th Course of the International School of Subnuclear Physics. The countries represented were: Algeria. Canada. Chile. China. Czechoslovakia. Denmark. France. the Federal Republic of Germany. Greece. Holland. India. Italy. Pakistan. Peru. Poland. Sweden. Switzerland. Turkey. the Union of Soviet Socialist Republics. the United Kingdom. and the United States of America. The School was sponsored by the European Physical Society (EPS). the Italian Ministry of Education (MPI). the Italian Ministry of University and Scientific Research. the Sicilian Regional Government (ERS). and the Weizmann Institute of Science. The new topic discussed in some detail at the School was QCD phenomenology at 200 TeV. This energy frontier represents the goal for subnuclear physics after LHC and sse. The main lecturers were T.D. Lee. L. Cifarelli. Y. Dokshitzer and A. Ringwald. There are two possibilities. one optimistic. the other pessimistic. LHC and SSC can produce remarkable discoveries. In this case. the need to go to higher energies will be obvious. In the pessimistic case. LHC and SSC will produce the strongest evidence for the validity of the Standard Model. The need for higher energies will be impelled. In neither case can we wait. If the 200 TeV frontier is to be reached within our lifetime we need to start now: thinking and preparing the tools. Theory and R&D for future detectors are the basic points of the 200 TeV frontier.

[Phenomena Beyond the Standard Model: What Do We Expect for New Physics to Look Like?](#) - Roman Pasechnik 2020-09-03

This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: [frontiersin.org/about/contact](http://frontiersin.org/about/contact).

**Electroweak Symmetry Breaking - Proceedings Of The International Workshop** - Muta Taizo 1992-08-08

The papers presented here focus on new developments in both theoretical and phenomenological aspects of standard theory, with an emphasis on understanding of the mechanism of electroweak symmetry breaking. This workshop covers the formal aspects and the related new models of electroweak symmetry breaking and the present status of the Standard Model.

International Conference on Flavor Physics - Yueliang Wu 2002

This volume contains many excellent articles presenting the most recent progress in high energy physics and the current interesting problems concerning flavor physics. The reader will see how flavor physics has become a central area of particle physics, with the Standard Model (SM) being subjected to increasingly precise experiments, and why the remaining puzzles in the SM, such as the mechanisms of symmetry breaking and CP violation, as well as fermion mass and mixing generation, all are mysteries hidden in the physics of flavor. The book also shows that flavor physics is likely to be a window for probing new physics beyond the SM for many years to come.

Recent Advances In The Superworld - Proceedings Of The International Workshop - Lopez J L 1994-03-29

This volume presents the most recent applied and methodological issues in stochastic modeling and data analysis. The contributions cover various fields such as stochastic processes and applications, data analysis methods and techniques, Bayesian methods, biostatistics, econometrics, sampling, linear and nonlinear models, networks and queues, survival analysis, and time series. The volume presents new results with potential for solving real-life problems and provides novel methods for solving these problems by analyzing the relevant data. The use of recent advances in different fields is emphasized, especially new optimization and statistical methods, data warehouse, data mining and knowledge systems, neural computing, and bioinformatics.

**Electroweak Symmetry Breaking** - Adam Smetana 2014-06-30

**Strong Coupling Gauge Theories in LHC Era** - Hidenori Fukuya 2011

The purpose of the Workshop is to have intensive discussions on both theoretical and phenomenological aspects of strong coupling gauge theories (SCGTs), with particular emphasis on the model buildings to be tested in the LHC experiments. Dynamical issues are discussed in lattice simulations and various analytical methods. This proceedings volume is a collection of the presentations made at the Workshop by many leading scientists in the field.

**Advanced School on Electroweak Theory** - D Espriu 1998-04-04

Contents: Quark Mixing and CP Violation (F J Gilman) Heavy Quark Effective Theory (A V Manohar) Introduction to Low-Energy Supersymmetry (G F Giudice) An Introduction to Dynamical Electroweak Symmetry Breaking (R S Chivukula) Hadron Colliders, the Top Quark, and the Higgs Sector (C Quigg) Physics Potential of LEP2 and NLC (R Miquel) Precision Tests of the Electroweak Theory (P Langacker) Readership: High energy physicists. Keywords:

**'97 QCD and High Energy Hadronic Interactions** - J. Thanh Van Tran 1997

**Quantum Fields on the Computer** - Michael Creutz 1992

This book provides an overview of recent progress in computer simulations of nonperturbative phenomena in quantum field theory, particularly in the context of the lattice approach. It is a collection of extensive self-contained reviews of various subtopics, including algorithms, spectroscopy, finite temperature physics, Yukawa and chiral theories, bounds on the Higgs meson mass, the renormalization group, and weak decays of hadrons. Physicists with some knowledge of lattice gauge ideas will find this book a useful and interesting source of information on the recent developments in the field.

*The Origin of Mass and Strong Coupling Gauge Theories* - Masayasu Harada 2008

This volume includes discussion on new dynamical features in the light of (deconstructed/latticized) extra dimensions, holographic QCD, Moose/hidden local symmetry, and so on. New insights into the QCD as a prototype of strong coupling gauge theories as well as in its own right, particularly in hot and dense matter are included.

*Dynamical Symmetry Breaking - Proceedings Of The 1991 Nagoya Spring School* - Yamawaki Koichi 1992-02-28

This is the first systematic volume which presents a detailed introduction to every facet of the modern version of Dynamical Symmetry Breaking which has been rapidly developed in recent years. Most of the lectures are given by pioneers in this new field and are geared mainly to the level of second year graduate students.

**Neutrinos and Implications for Physics Beyond the Standard Model** - Robert Schrock 2003

This important book presents the proceedings of the conference "Neutrinos and Implications for Physics Beyond the Standard Model", put on by the Yang Institute for Theoretical Physics, State University of New York at Stony Brook. The observation of neutrino masses and lepton mixing constitutes the first confirmed evidence for physics beyond the Standard Model. This evidence includes the measured deficiency of charged current reactions induced by solar neutrinos and the anomalous zenith angle distribution of atmospheric neutrinos. A profound question now facing theorists is: What do these observations imply for new physics? At the conference, members of the major experiments gave an update on current experimental evidence from solar and atmospheric neutrino data for neutrino oscillations, and status reports from KamLAND and MiniBooNE. Leading theorists also reported on neutrinoless double beta decay, high energy neutrino scattering and precision electroweak data, theoretical models for neutrino masses and lepton mixing, and constraints from neutrino data, etc. Since neutrino physics is at present one of the most exciting areas of particle physics, this volume should be of interest to a wide variety of students and researchers in physics.

**Electroweak Symmetry Breaking** - Mgr. Adam Smetana 2014-05-30

With this thesis the author contributes to the development of a non-mainstream but long-standing approach to electroweak symmetry breaking based on an analogy with superconductivity. Electroweak symmetry breaking is assumed to be caused by dynamically generated masses of typical fermions, i.e., of quarks and leptons, which in turn assumes a new dynamics between quarks and leptons. Primarily it is designed to generate fermion masses and electroweak symmetry breaking is an automatic consequence. After the summary of the topic, the first main part of the thesis addresses the question as to whether the masses of known quarks and leptons provide sufficiently strong sources of electroweak symmetry breaking. It is demonstrated that neutrino masses subject to the seesaw mechanism are indispensable ingredients. The other two parts of the thesis are dedicated to the presentation of two particular models: The first model is based on the new strong Yukawa dynamics and serves as a platform for studying the ability to reproduce fermion masses. The second, more realistic model introduces a flavor gauge dynamics and its phenomenological consequences are studied. Even though, in the past, this type of models has already been of some interest, following the discovery of the Standard-Model-like Higgs particle, it is regaining its relevance.

**Dynamical Stabilization of the Fermi Scale** - Francesco Sannino 2012-10-28

Strong dynamics constitutes one of the pillars of the standard model of particle interactions, and it accounts for the bulk of the visible matter in the universe made by ordinary protons and neutrons. It is therefore a well posed question to ask if the rest of the universe can be described in terms of new highly natural four-dimensional strongly coupled theories. The main goal of this lecture-based primer is to provide a coherent overview of how new strong dynamics can be employed to address the relevant challenges in particle physics and cosmology from composite Higgs dynamics to dark matter and inflation. We will first introduce the topic of dynamical breaking of the electroweak symmetry also known as technicolor. The knowledge of the phase diagram of strongly coupled theories plays a fundamental role when trying to construct viable extensions of the standard model. Therefore we present the state-of-the-art of the phase diagram for gauge theories as function of the number of colors, flavors, matter representation and gauge group. Recent extensions of the standard model featuring minimal technicolor theories are then introduced as relevant examples. We finally show how technicolor or in general new strongly coupled theories can lead to natural candidates of composite dark matter and inflation.

*Flavor Physics* - Yue-Liang Wu 2002-05-14

This volume contains many excellent articles presenting the most recent progress in high energy physics and the current interesting problems concerning flavor physics. The reader will see how flavor physics has become a central area of particle physics, with the Standard Model (SM) being subjected to increasingly

precise experiments, and why the remaining puzzles in the SM, such as the mechanisms of symmetry breaking and CP violation, as well as fermion mass and mixing generation, all are mysteries hidden in the physics of flavor. The book also shows that flavor physics is likely to be a window for probing new physics beyond the SM for many years to come.
