Health Promotion and Aging - David Haber, PhD 2013-03-21

Praise for the fifth edition: I applaud Dr. Haber for addressing key concepts and issues in health promotion and aging, and making them accessible, respectful, mindful, and empowering. -Marilyn R. Gugliucci, PhD Director, Geriatrics Education and Research, University of New England Past President, AGHE David Haber has done it again! ...A must-have for students and faculty alike. -Barbara Resnick, PhD, CRNP, FAAN Substantially revised and updated, the sixth edition of this classic text continues to define healthy aging by illustrating how to prevent disease and make large-scale improvements toward health and wellness. New to this edition is current information regarding the future of Medicare, Social Security, and the Affordable Care Act, information about the Healthy People 2020 initiative supported with examples, up-to-date and comprehensive medical screening recommendations, and an extensive review of new developments in complementary and alternative medicine, geriatric mental health, community health, and public health policy. A new section on technology and aging is also included, as well as

an instructor's manual. The text synthesizes current research findings with practical applications, and includes detailed and updated descriptions of the author's own programs that have been recognized by the National Council on the Aging's Best Practices in Health Promotion and Aging. New to this Edition: Up-to-date coverage of the future of Medicare, Social Security, the Affordable Care Act, and the Healthy People 2020 initiative New section on technology and aging Current developments in complementary and alternative medicine New findings regarding geriatric physical and mental health and community health Current information about exercise, nutrition and weight management Updated information on public health policy Current trends in long-term care and end-of-life-care Updated sociodemographic trends Instructor's manual

Contesting Aging & Loss - Janice Elizabeth Graham 2010-01-01

"This volume invites readers to re-imagine the losses of aging by listening to the views of elders themselves. Researchers, students of aging, and policy makers should find this work most enlightening." - Athena McLean, Central Michigan University

Aging and Cognitive Processes - Fergus Craik 2012-12-06

For a variety of reasons, there has been an

explosion of interest in research on aging over the past few years. The reasons include an awareness that a large and growing proportion of our population is over 65 and that research findings can contribute to their health, satisfaction, and efficiency as members of society; the fact that funding agencies have endorsed the need for more research effort in the area by setting up special programs; and also the fact that researchers themselves are turning more to practical problems as many theoretical issues (in experimental psychology at least) seem to remain as intractable as ever. Thus, at present there is widespread interest in aging, but there is also a lack of knowledge as to what has already been accomplished in the area, what the theoretical issues are, and what factors contribute to the methodological and practical difficulties. The time is propitious for meetings of experts in various aspects of the aging process, both to discuss among themselves latest advances in the field and also to integrate known information for researchers and practitioners. In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto. The topic chosen was Aging and Cognitive Processes, and the edited contributions to the symposium form the chapters of the present book.

Aging and the Law - Lawrence A. Frolik 1999

A collection of 47 portions of essays, articles, and books addressing many of the social, political, and legal problems occasioned by having an increasing number of older Americans. First defines and explores the emerging field of elder law, then looks at such dimensions as work, income, and wealth; housing; mental capacity; health care decision making; long-term care; health care finance; family and social issues; abuse, neglect, victimization, and elderly criminals; and legal

representation and ethical considerations.

Broadway, Schrafft's and Seeded Rye - Lyla Blake Ward 2016-02-01

A lighthearted look at life in the 1930's and early 1940's in a unique neighborhood of New York City. Through essays, poems, vintage photos and illustrations, the author recalls the stores, the restaurants, the movie theaters and most of all, the close knit families that made this little piece of Manhattan so special.

Ethics, Health Policy and (Anti-) Aging: Mixed Blessings - Maartje Schermer 2014-07-08

This volume focuses on the ethical and philosophical issues that arise in an aging society, and the implications of these issues for healthcare and social policy. After a brief overview of biomedicine's changing approach of ageing and longevity and of the new expectations that these changes generate, various ethical, social, and policy issues that surround aging and longevity are discussed. First, the images and social meanings of aging and old age in our society are explored, including their normative dimensions and implications for policy. Next, ethical issues in the care for frail elderly are discussed, as well as notion of good care and end-of-life decisions. Finally, the ethical and social implications of emerging possibilities for anti-aging and lifespan extension are considered. The book concludes with an overview of the relevance of the issues discussed for policy making on professional, national and international levels.

Successful Aging as a Contemporary Obsession - Sarah Lamb 2017-05-22

In recent decades, the North American public has pursued an inspirational vision of successful aging—striving through medical technique and individual effort to eradicate the declines, vulnerabilities, and dependencies previously commonly associated with old age. On the face of it, this bold new vision of successful, healthy, and active aging is highly appealing. But it also rests on a deep cultural discomfort with aging and being old. The contributors to *Successful Aging as a Contemporary Obsession* explore how the successful aging movement is playing out across five continents. Their chapters investigate

a variety of people, including Catholic nuns in the United States; Hindu ashram dwellers; older American women seeking plastic surgery; aging African-American lesbians and gay men in the District of Columbia; Chicago home health care workers and their aging clients; Mexican men foregoing Viagra; dementia and Alzheimer sufferers in the United States and Brazil; and aging policies in Denmark, Poland, India, China, Japan, and Uganda. This book offers a fresh look at a major cultural and public health movement of our time, questioning what has become for many a taken-for-granted goal—aging in a way that almost denies aging itself.

[Emotion and Aging: Recent Evidence from Brain and Behavior](#) - Natalie Ebner 2015-05-05

Emotions play a central role in every human life, from the moment we are born until we die. They prepare the body for action, guide decisions, and highlight what should be noticed and remembered. Since emotions are central to daily functioning and well-being, it is important to understand the extent to which aging affects the perception of, attention to, memory for, as well as experience and regulation of emotions. An early scientific view of how people's emotions are affected by aging argued that aging led to a deterioration of emotional function. This theory, represented by for example Carl Jung (1875-1961), claimed that old age is a period of life when people feel an increased emotional sameness and less emotional energy. According to this scientific view, the aging emotional landscape was bleached, barren, and flattened. Current psychological research, however, shows that emotion is rather a psychological domain that is relatively unaffected by the aging process or even improves with age, in contrast to most cognitive functions. For example, even though there is evidence that aging is associated with deficits in emotion recognition, various emotional functions seem to remain intact or become better with age, such as the ability to regulate one's emotions or the extent of experiencing positive emotions. However, more research is needed to determine brain and behavior related, quantitative and qualitative age-related changes of different aspects of

emotion processing and emotional functioning. In the current *Frontiers* research topic we aim to present exciting new findings related to the effects of healthy aging on both more perceptually driven bottom-up as well as more cognitively driven top-down aspects of emotions. In particular, questions such as the following need to be raised and addressed: What neural and behavioral processes are underlying age differences in emotion perception and memory for emotional information? Are there differences between how older and younger adults experience and regulate their emotions, and what drives these differences? Is there a gradual reduction or more of a qualitative change of our emotional experiences over the life cycle, from the turbulent childhood and youth to the mellower old age? And what aspects of age-related changes in emotional processing can be explained by age-related changes in the brain, and which are more affected by other factors such as changes in other body systems, in experiential processes, or in overall life goals?

Successful Aging - Daniel J. Levitin 2020-01-07
INSTANT TOP 10 BESTSELLER *New York Times *USAToday *Washington Post *LA Times
"Debunks the idea that aging inevitably brings infirmity and unhappiness and instead offers a trove of practical, evidence-based guidance for living longer and better." —Daniel H. Pink, author of *When and Drive*
SUCCESSFUL AGING delivers powerful insights: • Debunking the myth that memory always declines with age • Confirming that "health span"—not "life span"—is what matters • Proving that sixty-plus years is a unique and newly recognized developmental stage • Recommending that people look forward to joy, as reminiscing doesn't promote health
Levitin looks at the science behind what we all can learn from those who age joyously, as well as how to adapt our culture to take full advantage of older people's wisdom and experience. Throughout his exploration of what aging really means, using research from developmental neuroscience and the psychology of individual differences, Levitin reveals resilience strategies and practical, cognitive enhancing tricks everyone should do as they age. *Successful Aging* inspires a powerful new approach to how readers think about our final decades, and it will revolutionize the way

we plan for old age as individuals, family members, and citizens within a society where the average life expectancy continues to rise. Cultural Perspectives on Aging - Andrea Hülsen-Esch 2021-11-22

Current demographic developments and change due to long life expectancies, low birth rates, changing family structures, and economic and political crises causing migration and flight are having a significant impact on intergenerational relationships, the social welfare system, the job market and what elderly people (can) expect from their retirement and environment. The socio-political relevance of the categories of 'age' and 'ageing' have been increasing and gaining much attention within different scholarly fields. However, none of the efforts to identify age-related diseases or the processes of ageing in order to develop suitable strategies for prevention and therapy have had any effect on the fact that attitudes against the elderly are based on patterns that are determined by parameters that are not biological or sociological: age(ing) is also a cultural fact. This book reveals the importance of cultural factors in order to build a framework for analyzing and understanding cultural constructions of ageing, bringing together scholarly discourses from the arts and humanities as well as social, medical and psychological fields of study. The contributions pave the way for new strategies of caring for elderly people.

From Strength to Strength - Arthur C. Brooks 2022-02-15

The roadmap for finding purpose, meaning, and success as we age, from bestselling author, Harvard professor, and the Atlantic's happiness columnist Arthur Brooks. Many of us assume that the more successful we are, the less susceptible we become to the sense of professional and social irrelevance that often accompanies aging. But the truth is, the greater our achievements and our attachment to them, the more we notice our decline, and the more painful it is when it occurs. What can we do, starting now, to make our older years a time of happiness, purpose, and yes, success? At the height of his career at the age of 50, Arthur Brooks embarked on a seven-year journey to discover how to transform his future from one of disappointment over waning abilities into an

opportunity for progress. From Strength to Strength is the result, a practical roadmap for the rest of your life. Drawing on social science, philosophy, biography, theology, and eastern wisdom, as well as dozens of interviews with everyday men and women, Brooks shows us that true life success is well within our reach. By refocusing on certain priorities and habits that anyone can learn, such as deep wisdom, detachment from empty rewards, connection and service to others, and spiritual progress, we can set ourselves up for increased happiness. Read this book and you, too, can go from strength to strength.

Aging, Society, and the Life Course, Sixth Edition - Suzanne R. Kunkel, PhD 2021-06-15

Newly revised and updated, this classic text examines the impact of social forces on the aging process. It considers aging from personal, family, community, societal, and global perspectives. The sixth edition reflects significant changes in the field of social gerontology. It delves deeply into the life course paradigm to demonstrate how aging experiences are shaped by individuals' pasts and by a sweeping range of social factors. It uses a diversity, equity, and inclusion lens to underscore how social and economic advantages and disadvantages can accumulate with aging. Chapters reflect the richness and complexity of family life, work and retirement, health, and community engagement. The book addresses landmark changes in laws and policies and highlights innovative developments to enhance the independence of elders. It emphasizes what an aging society means for people of all ages and generations, and the causes and consequences of pervasive ageism. Provocative essays explore contemporary ethical, legal, and social issues. Especially written for courses in social gerontology and sociology of aging, the book is also valuable for curricula in social work, allied health, and the ever-growing range of disciplines and professions that are affected by individual and population aging. The sixth edition offers several new features to enhance the teaching and learning experiences, including Stop and Think boxes to foster curiosity, critical thinking, and personal connections to the ideas; bullet-point summaries to reinforce chapter takeaways; and an updated and expanded Instructor's Manual. Purchase includes digital access for use on most mobile devices or computers. New to the Sixth Edition: Draws attention to the influence of the life course on aging Discusses

how aging impacts people of all ages and generations Explores what the changing behaviors and attitudes of younger cohorts might mean for the future of aging Leverages a diversity, equity, and inclusion lens to understand variability and inequality in aging Provides updated knowledge about family life, work and retirement, health, community engagement, and ageism Highlights landmark changes in laws and policies that affect aging, such as evolving health care policies and laws related to intergenerational obligations Describes innovative models and interventions to enhance the independence and integration of elders in their communities Incorporates new content and provocative essays on contemporary ethical, legal, and social issues Key Features: Presents information in straightforward, engaging prose that seamlessly integrates bodies of evidence Highlights how aging is often a shared experience resulting from interactions with a complex set of social forces Demonstrates how the aging of individuals and entire generations occurs within layers of social context Probes causes of variability and inequality in aging across social categories Reveals the presence and consequences of ageism for individuals and societies Looks in-depth at aging in America with an eye to a global context Introduces and applies contemporary theories of aging to specific topics to demonstrate their utility for aging science and practice

Religion and Aging - Derrel R. Watkins 2001-10

Genetics and Evolution of Aging - Michael R. Rose 2013-03-09

Aging is one of those subjects that many biologists feel is largely unknown. Therefore, they often feel comfortable offering extremely facile generalizations that are either unsupported or directly refuted in the experimental literature. Despite this unfortunate

precedent, aging is a very broad phenomenon that calls out for integration beyond the mere collecting together of results from disparate laboratory organisms. With this in mind, Part One offers several different synthetic perspectives. The editors, Rose and Finch, provide a verbal synthesis of the field that deliberately attempts to look at aging from both sides, the evolutionary and the molecular. The articles by Charlesworth and Clark both provide population genetic perspectives on aging, the former more mathematical, the latter more experimental. Bell takes a completely different approach, arguing that aging may not be the result of evolutionary forces. Bell's model instead proposes that aging could arise from the progressive deterioration of chronic host pathogen interactions. This is the first detailed publication of this model. It marks something of a return to the type of aging theories that predominated in the 1950's and 1960's, theories like the somatic mutation and error catastrophe theories. We hope that the reader will be interested by the contrast in views between the articles based on evolutionary theory and that of Bell. MR. Rose and C. E. Ethics, Aging, and Society - Martha B. Holstein, PhD 2010-11-01

"Ethics, Aging and Society...is the first major work in ten years to critically address issues and methodologies in aging and ethics...This well-organized volume begins theoretically and offers new ways of thinking about ethics that can handle the complexities and realities of aging in particular social contexts."--Choice "This new research-based book, by experts in the field of ethics, is excellent and much-needed...I challenge you to consider reading this book and seeing all the ways in which you might be forced to rethink things that most of us take as given for ethics and aging. I know you will not be disappointed and I guarantee you will end up thinking long and hard about personal and professional decisions you may have made as

well as your assumptions about aging in America."--CFLE Network Newsletter (National Council on Family Relations) "This is a book that should be required reading for all involved in the ethical provision of services to the aging on any level, as well as for policy makers and administrators in positions of influence over the lives of older patients."--PsycCRITIQUES "...the authors' application of feminist ethics to frail elders rings true to both my clinical experience working with frail elders, and my research experience trying to understand their quality of life concerns...there were true gems of ideas [in this book] that illuminated the limitations of the dominant paradigm of autonomy in bioethics. [The authors] make a compelling critique of end-of-life care."--GeriPal: A Geriatrics and Palliative Care Blog This book presents second generation issues in ethics, aging, and society by presenting critical outcomes that arise when ethics is applied to the practical concerns that occur in day-to-day elder care. The first volume in over 10 years to address ethics and gerontology, it is unparalleled in its comprehensiveness and integration of well-developed philosophical arguments with empirical research, humanistic scholarship, and insights gained from practical experience. This book challenges the tried and true approaches to ethical issues in aging and opens avenues for creative problem-solving. The authors' diverse backgrounds bring the advantages of both interdisciplinary scholarship and practical experience to this comprehensive textbook. It is an essential resource for those interested in, and working with, older people, from upper-level undergraduate students and graduate-division students, to gerontology practitioners in training. Key Features: Presents the first major work in over 10 years to integrate the disciplines of ethics and aging Includes case studies derived from day-to-day practice Addresses individual/clinical ethics in health and long-term care and ethical issues raised by public policy, cultural norms and social attitudes Examines such critical issues as Alzheimer's disease, long-term care, ageism, public policy, anti-aging medicine, elder abuse, and natural disasters Explores new directions in ethical and social philosophy as they pertain to gerontology and care

Aging - Harry R. Moody 2020-07-16

Aging: Concepts and Controversies is structured to encourage a style of teaching and learning that goes beyond conveying facts and methods. This innovative text focuses on controversies and questions rather than on assimilating facts or creating a single "correct" view about aging or older people. Drawing on their extensive expertise, authors Harry R. Moody and Jennifer R. Sasser first provide an overview of aging in three domains: aging over the life course, health care, and socioeconomic trends. Each section then includes data and conceptual frameworks, helping students to make sense of the controversies and understand their origin, engage in critical thinking, and develop their own views. The Tenth Edition of this hallmark textbook includes amplified discussions focused on differences, diversity, structural inequalities, and inclusion, as well as contemporary issues, including climate change and immigration. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides. The Future of Aging - 2010-08-17

Just as the health costs of aging threaten to bankrupt developed countries, this book makes the scientific case that a biological "bailout" could be on the way, and that human aging can be different in the future than it is today. Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging, and why such interventions are appropriate based on our current historical, anthropological, philosophical, ethical, evolutionary, and biological context. Challenging concepts are presented together with in-depth reviews and paradigm-breaking proposals that collectively illustrate the potential for changing aging as never before. The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete. Examples include sirtuin-modulating pills, new concepts for attacking cardiovascular disease and cancer, mitochondrial rejuvenation, stem cell therapies and regeneration, tissue

reconstruction, telomere maintenance, prevention of immunosenescence, extracellular rejuvenation, artificial DNA repair, and full deployment of nanotechnology. The Future of Aging will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology.

Aging in East and West - Dr. Vern L. Bengtson, PhD 2000-09-20

Widely recognized experts present the first comparative analysis of recent developments among six Eastern and Western nations concerning population aging and its consequences. Chapters focus on demographic trends, sociocultural contexts, and policy implications. Nations selected as case studies include: the People's Republic of China, the Republic of Korea, Japan, Germany, the United Kingdom, and the United States. The editors and contributors call attention to the varied trajectories and effects of population aging in culturally diverse societies that are often at different stages or on different paths of economic development. Such analyses bring into sharper focus those conditions that are unique, or similar, and emphasize the ways in which cultural stereotypes of aging and the elderly complicate our understanding of the effects of world-wide population aging.
