Mastering Self-Motivation - Michael J. Provitera 2012-12-07

The surge of motivational titles flooding bookstore shelves amid the worst economic crisis since the Great Depression is evidence of our society's growing obsession with self-improvement. Recently two areas of growing interest among academics have been positive organizational behavior and psychological capital. While books on these subjects have led to a new understanding of motivation, they have limited their focus

to two ends of a continuum. This book pays heed to the extensive research and careful conclusions of academicians, and then crosses into the realm of self-help and massmarket literature. It has nine chapters that blend topics being taught over two decades in the classroom and practiced in management consulting. Each chapter invites you to learn both theoretical and practical concepts and encourages you to apply this knowledge to the workplace. This book thus seeks to mediate market-driven self-help dreams and academic literature, and provides theoretical concepts that can enhance individual motivation presented in a comprehensive and enjoyable manner. This is the first motivational book that brings together the academic and popular literature to bridge the gap between common sense and theoretical concepts.

Handbook of Research on Student Engagement - Sandra L. Christenson 2012-02-23

For more than two decades, the concept of student engagement has grown from simple attention in class to a construct comprised of cognitive, emotional, and behavioral components that embody and further develop motivation for learning. Similarly, the goals of student engagement have evolved from dropout prevention to improved outcomes for lifelong learning. This robust expansion has led to numerous lines of research across disciplines and are brought together clearly and comprehensively in the Handbook of Research on Student Engagement. The Handbook guides readers through the field's rich history, sorts out its component constructs, and identifies knowledge gaps to be filled by future research. Grounding data in real-world learning situations, contributors analyze indicators and facilitators of student engagement, link engagement to motivation, and gauge the impact of family, peers, and teachers on engagement in elementary and secondary grades. Findings on the effectiveness of classroom interventions are discussed in detail. And because assessing engagement is still a relatively new endeavor, chapters on measurement methods and issues round out this important resource. Topical areas addressed in the Handbook include: Engagement across developmental stages. Self-efficacy in the engaged learner. Parental and social influences on engagement and achievement motivation. The engaging nature of teaching for competency development. The relationship between engagement and high-risk behavior in adolescents. Comparing methods for measuring student engagement. An essential guide to the expanding knowledge base, the Handbook of Research on Student Engagement serves as a valuable resource for researchers, scientist-practitioners, and graduate students in such varied fields as clinical child and school psychology, educational psychology, public health, teaching and teacher education, social work, and educational policy.

The Science of Romance - Nigel Barber

...excellent: accurate, entertaining and thought-provoking... - American Scientist Virtually anyone interested in gender studies, human sexuality, the application of evolutionary theory to behavior, or psychology in general should consider this fascinating book must reading. - Booklist In this work on how evolution affects how we behave in the romantic and sexual realms, the author . . . kicks away Cupid in favor of Darwin and the result is fascinating . . . Barber is seemingly inexhaustible when it comes to diversity of thought . . . His accessible and lively writing keeps the book from feeling too wide-ranging and scholarly. . . . those who don't mind considering that romantic inclinations may be in one's genes and not in one's heart will find much to chew on in this weighty addition to the field of evolutionary psychology. -ForeWord Magazine Nigel Barber is one of the most innovative and intriguing investigators currently writing in the field of evolutionary psychology. His insights are always novel and provocative, challenging our preconceptions and encouraging us to consider alternative perspectives on gender differences and romantic and sexual behavior. His observations are certain to generate discussion from scientists, and from anyone who has ever been mystified by love. - Michael Cunningham, Ph.D., Professor of Psychology, University of Louisville, and President, International Network on Personal Relationships Recent advances in evolutionary psychology and biology have revolutionized the understanding of human courtship, marriage, and relationships. The Science of Romance provides an accessible and entertaining look at this new research and explores many of the implications for sexual and romantic relationships. The book is a pleasure to read and is highly recommended to the reader who wishes to better understand human relationships or wants an introduction to evolutionary psychology. - David C. Geary, Ph.D., Middlebush Professor of Psychological Sciences, University of Missouri at Columbia, and author of Male, Female: The Evolution of Human Sex Differences A gripping book throughout--scientifically sound and wonderfully illustrated with real life examples; must reading for everyone concerned with human mating, which is just about everyone. - David M. Buss, author of The Evolution of Desire: Strategies of Human Mating Have you ever wondered why divorce is so much more common now than a century ago? Why the sex appeal of certain body types and clothing styles changes so dramatically over time? Why so many liberated young women today prefer emotional commitment from men while their male counterparts seem always more interested in sowing their wild oats? According to evolutionary psychologist Nigel Barber, each of these aspects of modern life reflects two million years of hominid evolution. In The Science of Romance he explains that much of our present behavior can be traced back to the ancient evolved motives of our hunter-gatherer ancestors. In short, we exhibit the behaviors that have evolved over millennia to increase the reproductive success of the species. Also drawing on the mating behavior of various animals, Barber finds illuminating comparisons that help to explain human actions and reactions. Barber delves into a host of interesting topics: dating competition and aggression; female courtship signals that subtly manipulate male behavior; how exposure to different sex

hormones shapes the evolving brain in utero, which may account for the different behaviors of men and women; and much more. This absorbing book educates and entertains, while showing that many seemingly irrational aspects of our intimate romantic behavior make sense when understood in terms of our prehistoric ancestors and evolution. Nigel Barber, Ph.D. (Portland, ME), formerly an assistant professor of psychology at Birmingham-Southern College, is now a freelance writer and researcher, and the author of *Why Parents Matter: Parental Investment and Child Outcomes*.

Transformative Learning and Identity - Knud Illeris 2013-09-05

In the current ever changing world – the liquid modernity – the most pressing psychological challenge to all of us is to create and maintain a personal balance between mental stability and mental flexibility. In *Transformative Learning and Identity* Knud Illeris, one of the leading thinkers on the way people learn, explores, updates and re-defines the concept and understanding of transformative learning while linking the concept of transformative learning to the concept of identity. He thoroughly discusses what transformative learning is or could be in a broader learning theoretical perspective, including various concepts of learning by change, as opposed to learning by addition, and ends up with a new, short and distinct definition. He also explores and discusses the concept of identity and presents a general model depicting the complexity of identities today. Building on the work of Mezirow, various perspectives of transformative learning are analysed and discussed, including; transformative learning in different life ages; progressive and regressive transformations; motivation and identity defence; development of identity; personality and competence, and transformative learning in school, education, working life, and in relation to current and future life conditions. This vital new book by one of the leading learning theorists of our time will prove of lasting interest to academics, teachers, instructors, leaders and researchers in the field of adult learning and education. It will also appeal to many students and researchers of psychology and sociology in general.

Sustainable Futures for Higher Education - Jaan Valsiner 2018-09-26

This volume addresses the current situation in higher education and what creative action needs to be taken for the future development of the various systems of higher education. Higher education in the 21st centuries is under immense pressure from various sides. First, there is dramatic limitation of funding from public sources and limited and selective funding support from private sources that is re-constructing the landscape of higher education in most societies around the World. Secondly there is the continuous stream of administrative re-organization efforts of political origins (e.g. “the Bologna process”) that guide the advancement of higher education in our present time. Increasing privatization of all forms of higher education—from bachelor to doctoral levels—and its corresponding focus on the advancement of the kind of knowledge that has immediate applicability in various spheres of societies leads to the question- what kind of creativity is expected from the new cohorts of students—future makers of knowledge—once the current social re-organization of higher education systems becomes fully established. To address these questions the international, interdisciplinary cast of authors in this volume provides a multitude of possible scenarios for future development of the systems of higher education. This book on “Sustainable Futures of Higher Education” captures the current trends and perspectives of the Knowledge Makers from various nations of the world on meeting and greeting the challenges of globalization and the pressures of the knowledge economy. It makes a strong case for universities of tomorrow sustaining their autonomous thinking and yet nurturing an environment of collaborative partnership with society, corporate and industry to fuel innovations in plenty and continuous supply of new science and technologies. Higher Education has been and shall remain a powerful vehicle of national and global transformation. I see a great value of the publication in impacting the minds of the leaders in higher education around the globe for revitalizing the universities. Professor P. B Sharma, President of Association of Indian Universities, AIU How should the higher education system be in the globalization era? In this book Jaan Valsiner and his colleagues analyze, criticize the existing and propose a new higher education system. When we say “higher education”, three different layers are supposed to be there-- the lower, the middle and the higher. The latter has the function of production of new knowledges. Without new knowledge, our societies are never improving. Authors warn commercialized systems such as the “Bologna system” overestimate the homogeneity of education. ““Universities without Borders” would guarantee both diversity and innovation in the higher education

systems. Professor Tatsuya Sato, Dean of Research, Ritsumeikan University
