With this book

of handouts, you'll learn how to: \* Challenge automatic negative thoughts and beliefs \* Develop rational, helpful thoughts and belief systems \* Calm yourself down in social situations \* Accept yourself for who you are \* Feel empowered and in control of your life Our hope is that this new series will be used by millions of people with social anxiety disorder, as they begin learning the cognitive strategies that will help them get better. The brain's "neuroplasticity" is amazing, and you can learn to think, believe, and feel rationally, instead of letting anxiety cripple your life.

Why this book has been written  
... FEA is gaining popularity  
day by day & is a sought after  
dream career for mechanical  
engineers. Enthusiastic  
engineers and managers who  
want to refresh or update the  
knowledge on FEA are  
encountered with volume of  
published books. Often  
professionals realize that they  
are not in touch with  
theoretical concepts as being  
pre-requisite and find it too  
mathematical and Hi-Fi. Many  
a times these books just end up  
being decoration in their book  
shelves ... All the authors of  
this book are from IITs &  
IISc and after joining the  
industry realized gap between  
university education and the  
practical FEA. Over the years  
they learned it via interaction  
with experts from international  
community, sharing experience  
with each other and hard route  
of trial & error method. The  
basic aim of this book is to

share the knowledge &  
practices used in the industry  
with experienced and in  
particular beginners so as to  
reduce the learning curve &  
avoid reinvention of the cycle.  
Emphasis is on simple  
language, practical usage,  
minimum mathematics & no  
pre-requisites. All basic  
concepts of engineering are  
included as & where it is  
required. It is hoped that this  
book would be helpful to  
beginners, experienced users,  
managers, group leaders and  
as additional reading material  
for university courses.

**The Great Scientists in Bite-Sized Chunks** - Meredith

MacArdle 2015-09-03

Since ancient times, the greatest minds have tried to make sense of the universe by observing objects far beyond our abilities to see or touch - from the smallest atom to the farthest star. Covering, in chronological order, the key discoveries of the most prolific thinkers in each scientific field, including Aristotle, Darwin, da Vinci, Newton, Descartes and Hawking, the book also includes highlights of the most influential scientists' lives and works. Learn how Ptolemy fixed his results to match his theories; how Freud used cocaine to expand his thinking; and how Tim Berners-Lee, inventor of the World Wide Web, was banned from using university computers after being caught hacking. Revealing how human curiosity knows no bounds, this book showcases the visionaries who have dared to question established 'truths' and whose theories shaped how we now look at the world.
