Aviation Journey For Smart People Beatrice Filip 2021-03-10 I have created this book for motivated people like me, who worked hard to achieve their goals, never giving up when encountering setbacks. This is a book created for pilots, but also a guide for passengers who love to travel and want to be always informed. We breathe a sigh of relief after a difficult year - 2020. It was a year in which we were all tried to balance numerous factors: mental, social, financial, professional, and family life. I believe that there is a winner in everyone's soul. We invite you to read the book, "Aviation Journey for Smart People". By means of it, we share information about how to prepare for the Aviation Interviews, Human Resources, Group Exercises, Body Language, Pilot Aptitude Test with explanations, and suggestions for solutions. We offer a series of 250 Technical Questions and Answers (Feedback from pilots), Simulator Preparation, Charts Briefing, carefully selected from company manuals, which assessors use in all aviation interviews. In the second part, we invite you to the magical world of the cockpit at 10,000 m to discover together the secrets of aviation.

Airman Certification Standards Private Pilot Airplane Federal Aviation Administration (FAA) The Federal Aviation Administration (FAA) has published the Private Pilot-Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes FAA-S-ACS-6, Private Pilot-Airplane Airman Certification Standards, Change 1. The FAA views the ACS as the foundation of its transition to a more integrated and

systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which both internal and external stakeholders identify changes in regulations, safety recommendations, or other factors. These changes are then evaluated to determine whether they require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.

Aviation Safety U S Government Accountability Office (G 2013-06) Pursuant to a congressional request, GAO reviewed the Federal Aviation Administration's (FAA) oversight of general aviation safety, focusing on the: (1) extent to which mountainous areas present higher risks than nonmountainous areas for general aviation; and (2) FAA actions to reduce the risks associated with mountain flying and the impact of those actions on general aviation. GAO also examined the legal and safety issues involved with the prohibition imposed on general aviation night operations at Aspen Airport. GAO found that: (1) mountain flying poses greater accident risks to general aviation pilots; (2) engine output and propeller efficiency decrease at higher elevations; (3) FAA alerts pilots to mountain flying risks during the pilot certification process and at subsequent safety seminars; (4) pilots involved in fatal general aviation accidents were not familiar with the hazards of mountain flying; (5) FAA should issue guidance identifying airports in mountainous areas that present unique challenges and recommend routes for approach and takeoff at those airports under visual flight rules; (6) FAA should encourage pilot training by approving mountain flying courses and allowing pilots who complete such training to receive a "mountain endorsement" that can be used in lieu of the biennial flight review requirement; (7) FAA should develop certification test questions that highlight mountain flying risks, since the current test does not include any; (8) FAA has legal authority to resolve the dispute concerning the restriction of night operations at Aspen Airport; and (9) FAA has several options to consider in resolving the dispute at Aspen Airport.
